PURPOSE OF THE DOCUMENT

This Environmental and Social Management Plan (ESMP) is prepared as part of the requirements of the Safeguards Framework for Clean Development Mechanism (CDM) projects implemented under the Carbon Finance Support Facility (CFSF) of the Land Bank of the Philippines (LBP). The Environmental and Social Safeguards Framework (ESSF) was developed to ensure the establishment of protection, compliance, and mitigation measures for relevant environmental and social aspects of projects under the CDM program which covers the Methane Recovery and Power Generation Projects in pig farms.

Scope

Since the Project is a key component of RDF Ayala Farm's wastewater treatment facility (WWTF) – which handles the primary waste the piggery produces (manure) – this ESMP will cover the operations of the entire pig farm described herein. It will, however, highlight the management of impacts attributable to or associated with the Project.

1 PROJECT SUMMARY

The Methane Recovery and Power Generation Project of RDF Ayala Farm owned by RDF Feed, Livestock and Foods, Incorporated is an initiative developed under LANDBANK's CFSF. Its goal is to capture greenhouse gases, particularly methane from piggery wastewaters that would otherwise dissipate into the atmosphere, and convert them into electrical energy.

1.1 **Proponent Profile**

Proponent: RDF Feed, Livestock and Foods, Incorporated Business Address: Nepo Commercial Complex, Angeles City, Pampanga

CEO: Robert H. Lo, DVM

Farm Name: RDF Ayala Farm

Project Site: Brgy. San Agustin Magalang, Pampanga, Philippines

Farm Coordinates: 15°13'53.61"N, 120°41'52.59"E

Project Type: Livestock Project

Philippine Standard

Industrial Classification: 0145 - Hog Farming

Contact Persons RDF Ayala Farm

Safety Officer Manager: Ariel Perigrino
Telephone No.: 0998 988 9504
Pollution Control Officer: Dr. Ronald Dizon
Telephone No.: (63) 998 988 9507

LANDBANK Lending Programs

Management Group: Emellie V. Tamayo
Designation: Head / First Vice President
Talanhana Na.: (622) 405, 7200

Telephone No.: (632) 405-7309 Fax No.: (632) 528-8542

Environmental Program

Management Department: Prudencio E. Calado III

Designation: Head / Assistant Vice President

Telephone No.: (632) 405-7339 Fax No.: (632) 528-8484

1.2 The Pig Farm

Farm area: 57, 783 sq. m.
Production: Breeder Farm
Housing type: Tunnel-vented
Capacity : 2,200 sow level
Average population: 7,736 heads

Start of operation: 2008 Number of employees: 21

RDF Feed, Livestock and Foods, Incorporated (RDFFLFI) is a medium scale enterprise that evolved from a commercial livestock production to fresh and processed meat retail operation. The swine business unit of RDFFLFI started in year 2001, under the trade name E-pig with integrated breeding, farrowing and fattening operations.

RDF Ayala is one of the four pig farms (and one of the two breeding farms) of RDFFLFI. It is currently able and licensed (as per its Environmental Compliance Certificate) to house a maximum of 30,000 heads.

The farm is powered through a grid by Pampanga Electric Cooperative, Inc. I (PELCO I), but also utilizes electricity from biogas through the project. Water for its operations is mainly sourced from deep wells within and without its premises. Figure 1 shows the layout and basic facilities of the farm.

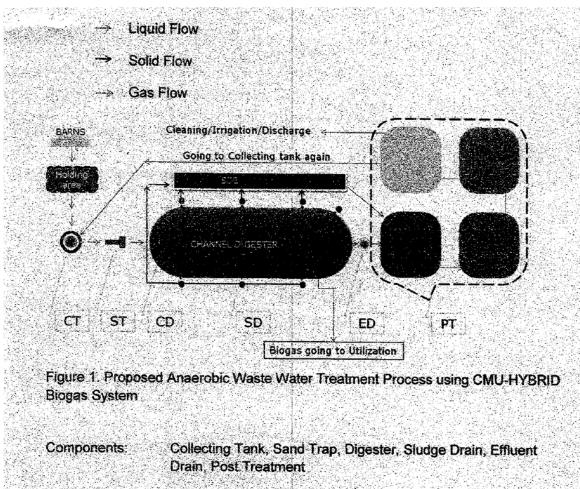

Figure 1. Site layout of RDF Ayala Farm

1.3 Existing Environmental Conditions

1.3.1 **Project Site**

The Project has been built inside the premises of RDF Ayala Farm Inc. (15°13'53.61"N, 120°41'52.59"E), a 19.05 ha property in Brgy. San Agustin, Magalang, Pampanga. Pampanga is in the island of Luzon, northern Philippines (see Map 1).

Map 1. Philippine map showing the location of the Province of Pampanga (Image from Wikipedia^a)

Map 2. Municipality of Magalang, Pampanga (highlighted in red) showing the location of the project site(Image generated using *Google Maps*^b)

1.3.2 Land Classification and Use

The Project's location is classified as agro-industrial [Zoning / Locational Clearance]. In its vicinity are croplands and quite a number of houses and churches (see Map 3).

Map 3. Satellite image of RDF Ayala Farm (15°13'53.61"N, $120^{\circ}41'52.59$ "E) and its vicinity (Image generated using Google Earth)

Image 1. Satellite image of RDF Ayala Farm showing areas (low: yellow; moderate: orange; high: red) at risk to flooding (Image generated using NOAH website^b)

1.3.3 Climate

The climate here is tropical. Most months of the year are marked by significant rainfall. The short dry season has little impact. According to Köppen and Geiger, this climate is classified as Am. The temperature here averages 27.1 °C. In a year, the average rainfall is 2349 mm. (climate-data.org) ¹

1.3.4 Topography and Soil

The Farm sits on a relatively flat land. The soil series in Magalang are composed of Arayat Soil Series which is Fine loamy, smectitic (ca.), isohyperthermic, VERTIC EQUIAQUENT.

1.3.5 Water Resources

The closest surface water to the property is the San Agustin creek 500 m away from the farm. The water is used for irrigation and farm related activities.

1.3.6 Natural Hazards

The area where the Farm is situated is not frequented by typhoons (low typhoon incidence).

Almost half the property's ground, from its southern perimeter northward, is at risk from low to medium (0.5 m) flooding.

1.3.7 People and Communities

There are a few, sporadically situated houses within the 500 m radius of the Farm.

1.4 **Project Description**

The Project covers the installation and operation of an anaerobic digester system and its ancillary facilities including post-treatment wastewater lagoons and a biogas-fueled electricity generation system. The biodigester and the power generation unit are collectively referred to herein as methane recovery facility (MRF).

1.4.1 Components and Design

RDF Ayala Farm's wastewater treatment process features three phases:

- Pre-Treatment, which involves mechanical removal of indigestible materials from and the breaking down of relatively large digestible particles in wastewaters prior to entering the reactors:
- Anaerobic digestion, or the disintegration of biodegradable materials in the wastewaters through biological processes facilitated by microbes which thrive in the conditions promoted by the reactor; and
- Post-Treatment of biogas, effluent, and sludge resulting from anaerobic digestion.

In general, the WWTF is mainly composed of a collecting tank, a covered concrete lagoon (hybrid channel), and a series of earthen clarifying lagoons (see Image). The interior of the biodigester is similar to a scaled up sand trap. A biogas generator set basically consists the MRF.

Overall, the anaerobic digester have been intended to accommodate wastes generated by the farm's maximum pig population (2,200 sow level) and capture enough biogas to run the project's facilities with a net energy requirement of zero. The design and layout of the WWTF are in the construction plans in Appendix A. Properties and specifications of the WWT-MRF, including capacities, outputs, and efficiencies, will be detailed in the succeeding version of this ESMP (see Section 4).

Table 1 presents the general aspects and technical features of each of these systems.

Table 1. Specifications of MS Farm's Wastewater Treatment Facility-Methane Recovery Facility

Phase		Process	Component	No. of Units	Description / Equipment
Pre-treatment Anaerobic treatment		settling	pre-storage settling tank	1	concrete 6 x 6 x 8 m (height) equipped with submersible pump
		anaerobic digestion / fermentation	reactor	1	earthen lagoon, lined and covered with 1 mm HDPE 3,930 m ³
	Biogas	combustion	scrubber system	1	-
	Blogas	Combustion	generator set	1	150kva
Post- treatment	Effluent	clarification (settling, aeration)	open lagoon	3	earthen lagoon lined with 1mm HDPE - 30 x 45 x 3m - 30 x 45 x 3m - 30 x 45 x 3m
	Sludge	drying	drying bed	1	earthen ditch lined with 1mm HDPE - 30 x 45 x 3m

1.4.2 **Operation**

The waste produced from the pig houses of the farm is treated in an enclosed anaerobic wastewater treatment facility consisting of a collection tank, a biogas digester and post treatment lagoons. The digester is covered by high-strength plastic material (HDPE) to collect the biogas and prevent atmospheric gases from leaking into the tank.

Inside the biodigester, wastewaters are continuously stirred by incoming and outgoing wastewaters, thus preventing sedimentation. This consequently results in minimal formation of sludge inside the chamber. Through hydraulic pressure created by influent, partially treated wastewaters exit the biodigester into the adjacent settling lagoon where they are stored indefinitely or until drawn to be used in the farm.

Biogas trapped in the biodigester is directed to gas collecting tank. When needed, gas from this tank is drawn to a gas conditioning equipment using a blower, and then to one of the generator sets that converts it to electrical energy used in the farm.

The biodigester has been designed to efficiently degrade organic solids in wastewaters. Hence, provision for sludge extraction and management will be established when the need arises.

Figure 2 illustrates the current processes involved and the project components employed in the wastewater treatment and power generation process in RDF Ayala Farm.

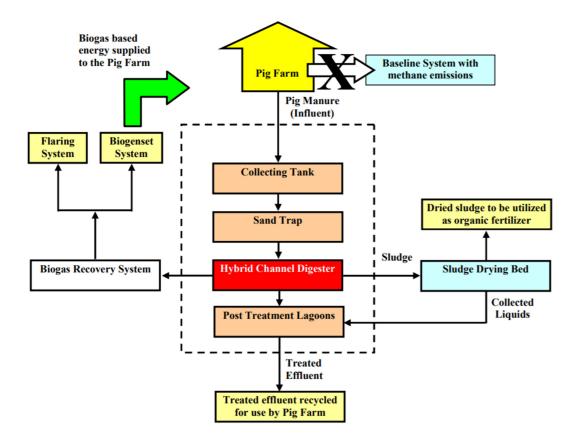

Figure 2. Wastewater treatment process of RDF Ayala Farm

2 ENVIRONMENTAL MANAGEMENT

2.1 Impact Assessment

2.1.1 Positive

RDF Ayala Farm provides employment opportunities to residents of the Municipality of Magalang and in the province of Pampanga and even to people from nearby provinces. It also generates significant revenue for the local government.

The project in particular improved the pig farm's method of handling manure and liquid waste. Compared to open lagoons, the biodigester has significantly amended the farm's wastewater treatment process, resulting in better effluent quality. Foul odors from effluents have also been greatly abated, improving the environment for both workers and livestock, as well as for neighboring communities.

Moreover, using biogas-generated electricity also reduces the farm's reliance on the grid (and on power from conventional fuels), translating to savings for the piggery business.

By providing a mechanism to capture methane and using it as a source of energy, the project has lowered Ayala Farm's overall carbon footprint. With inputs coming from about 7,736 hogs (current average), through the project, the farm is estimated to be capable of reducing greenhouse gas emissions equivalent to 1,278 tCO2e annually.

Finally, having been being registered as a component project activity (CPA) in the CDM Program, RDF Ayala Farm has an opportunity to earn monetary incentives by selling carbon credits to World Bank. It may also opt to trade its carbon credits in the wider carbon market.

Economy

Using biogas-generated electricity lessens the Farm's reliance on the grid, translating to savings for the piggery business. Sludge on site eliminates the need to purchase fertilizer for the Farm's vegetation. Selling it as soil amendment presents an opportunity to generate additional income. Further savings is also gained from reusing treated effluent.

Moreover, having been being registered as a component project activity (CPA) in the CDM Program, RDF Ayala Farm has an opportunity to earn monetary incentives by selling carbon credits to World Bank. It may also opt to trade its carbon credits in the wider carbon market after the Program.

Lastly, RDF Ayala Farm provides employment opportunities to residents of Brgy. San Agustin and generates revenue for the local government.

2.1.2 Negative

Certain aspects of the pig farms' and the project's operations inevitably result in potential harm to the environment, including generation wastewaters; hazardous and non-hazardous wastes; air pollutants; foul odors, noise, dust and other nuisance; and depletion of natural resources. These pose inherent risks to environmental quality and natural ecosystems and to health and safety of workers, communities, and livestock.

A. Wastewater Generation

Wastewaters saturated with dissolved manure and feed materials are primarily generated from raising around 7,736 pigs through intensive farming methods.

B. Solid Wastes Generation

Pig manure, sludge from treatment of wastewaters, and carcasses (non-infectious) make up the bulk of solid wastes generated in the Farm.

C. Hazardous Wastes Generation

Generation of potentially hazardous wastes mainly result from veterinary activities and use of various chemicals for cleaning and for maintenance of machineries. Biological materials from diseased pigs also pose significant risks to the health of workers and livestock.

D. Generation of Air Pollutants

Emissions from diesel- and biogas- fueled generator sets which supplement the grid for the Farm's power requirements are the main sources of air pollutants in the Farm.

E. Risks to Environmental Quality

- ¬ Pollution. The inadvertent release to the environment (through breaches and leaks) of the wastes listed above, especially of nutrient-rich materials, may cause serious damage to the quality of affected soil and aquatic resources.
- ¬ Global warming. Large amount of biogas, mostly composed of potent greenhouse gases, are produced during the anaerobic decomposition pig manure and other organic compounds. If allowed to escape to the atmosphere, these gases will contribute to the furthering of the deteriorating effects of global warming. Moreover, the use of power from the grid consumes non-renewable fuels which generate greenhouse gases when processed for electricity production.
- Resource depletion. Intensive farming demands for significant volume of freshwater. Neglectful sourcing and use of water in the Farm could deplete water resources.
- ¬ Site risks. The project site is a typhoon prone area. Strong winds may damage WWTF and MRF causing release of pollutants. Long periods of heavy rainfall could overtop wastewater lagoons and wash off sludge piles.

F. Health and Safety (Methane Recovery Facility)

Biogas is a mixture of gases produced during anaerobic digestion. It is mainly composed of methane and carbon dioxide, but other gases (nitrogen, hydrogen, hydrogen sulphide, ammonia, etc.) may also be present at lower concentrations.

- ¬ Fire and Explosion. The MRF presents a major fire and explosion hazard in the farm owing to the high concentrations of biogas (primarily consists of methane which is highly flammable and combustible) that it is designed to capture and process. Risk of explosion is elevated in areas where biogas is compressed in containers for storage.
- Asphyxiation and Poisoning. Methane and carbon dioxide are asphyxiants, substances that cause suffocation by displacing oxygen in the ambient air. Furthermore, carbon dioxide and hydrogen sulfide are considered poisonous when inhaled at high concentrations. In the farm, risks of asphyxiation and gas poisoning are high in the areas associated with the MRF and in confined spaces and poorly ventilated areas where fugitive biogas may collect.
- Infection and Infestation. Handling and processing of manure, wastewaters, and sludge exposes workers to various pathogens and parasites.

G. Health and Safety (General Operations)

¬ Odor, Noise, Dust

2.2 **Due Diligence**

RDF Ayala Farm commits to undertake due diligence in its dealings and operations through compliance with relevant regulatory safeguards and implementation of the environmental management and monitoring plan in Table 2 and of other relevant provisions herein.

2.2.1 Compliance to Regulatory Instruments (Legal Framework)

The Farm operates in the context of laws prescribing the regulatory safeguards in the following tables. Table 2 lists relevant national legal instruments concerned with environmental protection,

whereas Table 3 lists permits issued by local government agencies that mainly address health and safety aspects of the Farm and the Project.

Table 2. Environmental documents and statutory requirements regulating the operation of RDF Ayala Farm

2.2.3 Contingency Response

Below is overview of RDF Ayala Farm's current preparation and action plan in response to the following:

a. Fire

- Fire extinguishers are in strategic locations around the farm. Pig sheds have taps from which water for putting out fires can be sourced.

b. Earthquake

- The open grounds within the farm may serve as evacuation area for when an earthquake occurs.

c. Outbreak

- The farm's veterinarian or animal production specialist (provided by the integrator) is immediately notified to assess the situation and give instructions for the workers to carry out.

d. Power outage

- A standby diesel-fueled generator is able to supply the farm's electricity needs, in addition to the biogas genset.

e. Health emergencies

- A first aid kit is available at the site for minor health issues. Farm personnel have access to vehicles which can be used for transporting cases that may need more advanced medical care.

Most emergency services can be accessed in the Municipality of Magalang proper after about a 25 to 30-min drive from the farm.

In the interim, RDF Ayala Farm hereby commits to develop a more comprehensive contingency preparedness and response plan that will address incidents of fire; natural hazards (earthquake); outbreak; health emergencies; and environmental emergencies (leaks and spills of wastewaters and hazardous wastes, WWTF-MRF system breakdowns). This plan will be appended in the succeeding version of this ESMP.

2.2.4 Occupational Health and Safety

In addition to the health and safety measures presented in Table 3, RDF Ayala Farm will develop a more comprehensive health and safety risk management plan which will deal with general occupational health and safety issues associated with work in the pig farms. Health complaints and accidents will be recorded in a register and will serve as indicators of the plans effectiveness, together with results of workers' annual health check-ups. This plan will be appended in the succeeding version of this ESMP.

2.3 Monitoring, Reporting and Auditing

The proponent will perform the monitoring plan in Table 3 and conduct regular inspection of its facilities not only for internal purposes but also to satisfy the requirements of the EMB for periodic self-monitoring reports (SMR). In addition, assessments will also be initiated during or immediately after incidents that may have compromised the integrity of the farm's facilities, especially of WWTF-MRF, and caused the release of pollutants in the environment. A registry of such incidents and other environmental emergencies and accidents will be maintained in the farm and its details reported in the SMR.

The SMR will contain the results of audits on the Farm's environmental performance in terms of resource utilization, waste management, regulatory compliance, and fulfillment of environmental commitments among others. Copies of this document will be tendered to EMB quarterly, as well as to LBP-EPMD (Environmental Program and Management Department) for reference and review purposes.

The PCO, Dr. Ronald Dizon, has been tasked to ensure that the farm is compliant with pertinent environmental regulations, including those listed in Table 3, and is performing its environmental commitments, including the implementation of this ESMP.

During the implementation of the CDM Program, LBP-EPMD will conduct monitoring activities in the farm at least twice a year to help the Proponent execute, identify gaps in, and improve and update this management

3 SOCIAL DUE DILIGENCE

RDF Ayala Farm aims to operate in a manner that is not only environmentally sustainable but socially acceptable as well. Below are some of the Proponent's efforts towards achieving this goal.

3.1 Consultation and Participation

Stakeholders of the Project were identified and invited by the Proponent, together with LBP-EPMD, through letters and notices to the consultative meeting held on July 27, 2017 at Oriental Hub, 663 Sta. Cruz, Magalang, Pampanga. The meeting was attended by at least 20 individuals from various institutions, including local officials and residents of communities near the project site.

All relevant information, especially those that pertain to the Project's environmental and social impacts, was communicated to the stakeholders during the consultations. The issues and queries they raised were all satisfactorily addressed by the Proponent and other presenters. Details of the points discussed in the meeting are in the minutes in Appendix B, as well as some photos documenting the event.

3.2 Grievance Redress Mechanism

The Safety officer, Ariel Perigrino, is hereby designated as the main contact person for grievances, feedbacks, and queries related to the project. She is to ensure that the details of complaints and the actions made to address the same will be recorded completely and truthfully in a register. Such information shall be part of the regular monitoring report for the Project and will be made available to relevant stakeholders.

The proponent will make every effort to settle any concern at the project level. Should its attempts be unsuccessful, issues will be raised to the following third party institutions for arbitration and possible resolution:

Office of the Barangay Chairman

Complaints shall be entertained in the barangay where the farms are situated. The barangay office concerned will facilitate the negotiation process and LBP-EPMD will ensure that the complainant is properly represented.

Municipal Office

Should no agreement be reached at the barangay level, the matter will be elevated to a municipal government office. Depending on the nature of the complaint, grievances may be addressed to the Municipal Health Office, Agriculturist Office, Environment and Natural Resources Office, or other relevant municipal agencies.

LBF

LBP through EPMD will take part on the resolution process only after the aggravated party has gone through the previous levels and finds the decisions rendered there unacceptable. EPMD will coordinate with the proponent to ensure that issues regarding the latter's project are resolved to the best interest of the complainant.

To further ensure the proponent's accountability, contact details of the farms' management and LPB-EPMD shall be provided to stakeholders during consultations and through postings at public notice boards in Barangay San Agustin's community hall and at RDF Ayala Farm's main gate. For this project, the following individuals will serve as grievance administrators:

Prudencio E. Calado III Head/Assistant Vice President, LBP-EPMD

Telephone No.: (632) 405-7339 Fax No.: (632) 528-8484

Ariel Perigrino

Safety Officer: RDF Ayala Telephone No.: 0998 988 9504

3.3 **Information Disclosure**

This ESMP and other relevant information regarding the project will be published in LANDBANKS's website where it can be readily accessed by the public. Printed copies of this document will be submitted to EMB Region 3 and will also be available in Barangay San Agustin office, in LANDBANK's library (1598 M.H. Del Pilar cor Dr. J. Quintos St., Malate, Manila, Philippines), and in the World Banks InfoShop.

3.4 Equal Opportunity

RDF Ayala Farm is an equal opportunity employer, not regarding gender, age, disability, and ethnicity in evaluating and hiring potential employees. Presently, RDF Ayala Farm workforce is consisted of 17 males and 3 females. Most of the male workers take on manual, physically demanding work such as animal handling and facility maintenance.

3.5 Resettlement

The project is located inside the premises of RDF Ayala Farm, a private property. No individual was displaced for nor were there any indigenous peoples affected by the establishment of the farm and the project.

3.6 Others

Employees of RDF Ayala Farm receive standard basic salary at the minimum, 13th month pay, and other regular statutory benefits, in addition to free food and lodging at the farm.

4 ESMP REVIEW AND UPDATING

This ESMP shall be reviewed annually and will be updated subject to the results of the semiannual monitoring activities conducted by RDF Ayala Farm and LBP-EPMD. Reviews may be done more frequently or earlier than schedule, especially after events resulting in significant adverse effect to the environment.

In the first updated version of this ESMP, which will be published in the last quarter of this year (2019), the following information and documents will be provided:

- properties, specifications, and performance parameters of the WWT-MRFs;
- WWTF-MRF Operations Manual;
- cost of implementing the Environmental Management and Monitoring Plan;
- Contingency Preparedness and Response Plan; and
- Health and Safety Risk Management Plan
- Biosecurity protocol

5 INSTITUTIONAL ARRANGEMENTS

5.1 **The Proponent**

The proponent, RDF Feed, Livestock and Foods, Inc., will be responsible in all the aspects of the project, including the implementation of this ESMP. It will shoulder all costs associated with the construction and operation of the project, internal monitoring activities, and meeting various statutory requirements. Specifically, it shall cause the accomplishment of the following:

- exercise environmental and social due diligence in implementing the Project
- incorporate sound practices in environmental, health, and safety management
- comply with relevant national and local laws and satisfy regulatory obligations
- perform diligent environmental and system monitoring
- prepare and submit on schedule accurate monitoring reports to EMB and LBP
- cooperate with the LBP and other regulatory agencies by providing assistance and correct and relevant information regarding the Project and its environmental performance for reference, review, and monitoring purposes
- promote transparency by maintaining open lines of communication with project stakeholders and giving them access to relevant information
- initiate resolution of conflicts that may arise as a result of the Project's operation

The Proponent, in close coordination with LBP, shall implement the Project based on LBP's ESSF and on the agreed activities and timelines stipulated in the memorandum of agreement (MOA) and subproject agreement (SPA) between the said entities.

5.2 LANDBANK

LBP shall serve as the financial and technical intermediary for the CDM Program of Activity (PoA) under which the Project of RDF Ayala Farm is being implemented. It shall provide the Proponent carbon and investment finance assistance for the installation of an anaerobic wastewater treatment facility equipped with a biodigester and methane-fueled power generator. Moreover, it shall act as the entity in charge of project validation and verification activities, and of collation of relevant information and monitoring data for the undertakings mentioned. Specifically, LANDBANK, through EPMD, shall:

- make available financing facilities to the Proponent, subject to existing lending policies of LBP
- coordinate and facilitate communications and transactions between the Proponent and World Bank or other Carbon Buyers, Designated Operational Entity, and when necessary, with other project partners
- administer the agreements (MOA, SPA) forged between LBP and the Proponent
- provide technical support and relevant trainings to farm owners and personnel in partnership with other institutions
- ensure compliance of the Project and its proponent with the rules governing PoAs and with its commitments in the MOA and SPA
- ensure compliance of the Project and its proponent with relevant standards and regulations and environmental commitments by conducting onsite monitoring and evaluation and desk reviews
- provide assistance to the Proponent in complying with statutory requirements for the Project
- ensure the Project's sustainability by monitoring the long-term implementation of the safeguards specified in this ESMP and its environmental performance in general
- gather, collate, and review pertinent information and documents (including safeguard instruments, reports, and permits and clearances) concerning the Project
- participate in conflict resolution initiated by the Proponent
- prepare and submit monitoring reports to World Bank regularly
- · satisfy its obligations under the Emissions Reduction Purchase Agreement between LBP and World Bank

LBP shall assist the Proponent in its implementation of the Project based on LBP's Safeguards Framework and on the agreed activities and timelines stipulated in the MOA and SPA.

5.3 Department of Environment and Natural Resources

The Department of Environment and Natural Resources (DENR) is the primary government institution mandated to manage and protect the Philippines' environment and natural resources. It is also the Designated National Authority (DNA) of the CDM Program in the Philippines. As DNA, its main role is to review and endorse PoAs to the United Nations Framework Convention on Climate Change.

5.3.1 Environmental Management Bureau

Through the EMB, DENR sanctions and regulates the activities of the Project by means of various legal instruments. EMB also leads (whether or not as part of a Multi-partite Monitoring Team) the periodic monitoring of the Project's compliance and impacts, including the fulfillment of the commitments stated in this ESMP. Prior to construction, EMB was the agency tasked to review and evaluate the environmental soundness of the Project and authorize its establishment through the issuance of an Environmental Compliance Certificate.

5.4 World Bank

The World Bank is the main Carbon Buyer of the Project, but will also serve as an advisor to LPB in carrying out the latter's responsibilities as the coordinating and managing entity for CDM projects. The Bank will conduct regular monitoring, audits, and appraisals on the Project's safeguards performance against its established policies, as well as provide technical guidance to LBP and to the Proponent.

6 SUB-PROJECT ACCOUNTABILITY

In line with Section 3.02 on *Sub-Project Development and Operation by the Sub-Project Entity*, Item (q) of the Sub-Project Purchase Agreement (SPA) signed by the Farm Management, the Sub-Project Entity (Farm Management) agrees and undertakes to:

(q) implement and operate the Sub-Project in compliance with the World bank Operational Policies, including without limitation and as applicable, the Environmental Management Plan, Resettlement Plan, Indigenous Peoples Plan, and any other requirement resulting from the application of the World Bank Operational Policies.

Having signed the SPA, the Farm Management is accountable to comply with the commitments stated in this document.

STAKEHOLDERS CONSULTATION

Clean Development Mechanism (CDM) of Methane Recovery Project by RDF Ayala July 27, 2017 Oriental Hub, Magalang, Pampanga 10:00 AM – 1:00 PM

The Stakeholders' Consultation was conducted at Oriental Hub, 663 Sta. Cruz, Magalang, Pampanga last July 27, 2017 at about 10:00 AM. Key stakeholders are listed below and include representatives of the people living in the vicinity and those that have administrative, social or political interest in the project or its vicinity

- a) Representative of Municipal Health and Sanitation Office of Magalang, Pampanga
- Representative of Municipal Environment and Natural Resources Office of Cararayan, Naga City
- c) Representative of the Mayor's office of the Municipality of Magalang, Pampanga
- d) Representative of the Agricultural Office of the Municipality of Magalang,

NOTE: See attached attendance sheet for the list of attendees

To set the stage for the consultation, the following were initially presented/discussed:

RDF Ayala's Environmental Management Plan and Biogas Facility
Climate Change

- Climate Change
- Clean Development Mechanism
- Process of CDM LBP Carbon Finance Support Facility

I. Opening of the Consultation Meeting

The program started at around 10:00 in the morning with a prayer. The meeting was started with Mr. Ariel Perigrino, Senior Operations Manager of RDF. In his opening remarks, he welcomed the participants in the meeting and stressed the purpose/importance of the consultation meeting that is:

- to collect and address stakeholders' feedbacks concerning the identification of
- the most important waste management issues; and to discuss the construction of Biogas Facility, it's benefits, and the significant Environmental Management Plan of RDF Ayala.

Afterwards, a video presentation was shown showing the history of RDF Feed. Livestock and Foods, Inc. from a contract-grower of San Miguel Foods, Inc. for poultry farm into a commercial business for poultry and eventually expanding to a

piggery farm. A video presentation was shown showing the history of RDF Feed, Livestock and Foods, Inc. from a contract-grower of San Miguel Foods, Inc. for poultry farm into a commercial business for poultry and eventually expanding to a piggery farm.

STAKEHOLDERS CONSULTATION

STAKEHOLDERS CONSULTATION
Clean Development Mechanism (CDM) of Methane Recovery Project by
RDF Ayala
July 27, 2017
Oriental Hub, Magalang, Pampanga
10:00 AM – 1:00 PM
RDF Ayala can earn carbon credits or CER by mitigating the emission thru methane

recovery and combustion system from farm wastes by establishing a Biogas Facility. He also enumerated various benefits and services under the CFSF which includes financing support, annual revenue stream and other co-benefits.

V. OPEN FORUM

QUESTIONS	ANSWERS
Mr. Pablo Mercado of the Municipal Government of Magalang asked Dr. Santiago on the cost of the biogas digester for ordinary pig farms and the cost of maintenance of the facility. Moreover, he asked for the standard size for the biogas digesters and how long would it produce for the digester to produce biogas.	According to Dr. Santiago, the Department of Science of Technology (DOST) estimated that it costs PhP2,700 – PhP3,500 per cubic meter to construct a biogas digester. He explained that the cost per cubic meter lowers as the capacity increases. On the other hand, the service and maintenance is not more than 5% of the project cost.
Furthermore, he asked if Government Financial Institutions (GFIs) could provide financing and what are the services it could extend to piggery farms.	Dr. Santiago provided the Biogas Calculator app to check the size of the biogas digesters provided the pig type and the no. of heads. It takes 2 months to design the biogas digester. From the design of the biogas it would take 6-8months for the construction.
	He later on added that any bank could finance the biogas digester but LANDBANK could provide all the services.
	Moreover, Mr. Rizaldo Vargas of the LBP-EPMD discussed that LBP is keen in providing financing depending on the sustainability of the business and the credit rating of the proponent. The interest rate is varying depending on the rating and other things to be considered.
Dr. Ronaldo Dizon of RDF Ayala asked why the polishing ponds are being required by the DENR to be cemented.	Dr. Santiago said that according to Clean Water Act and Solid Waste Act, the purpose of the liner is to ensure that there is no seepage to contaminate the

10:00 AM – 1:00 PM

II. RDF Ayala's Environmental Management Plan (EMP)

RDF Avala's project description and Environmental Management Plan was presented by Dr. Nervy Santiago of Alterna Verde. He designed the biogas system of RDF Ayala. He discussed the concept and design of biogas system and its component. Moreover, he also discussed that the system is a zero-discharged system that would ensure that the following will be implemented:

1) Odor Reduction

Pig housings are regularly cleaned. Enzymes are sprayed to minimize odor. Also, with the biogas system, the odor will be reduced since the wastewater will be treated.

Fly Control Program
 Piggery farm is always kept clean. Regular flushing is observed.
 Beffluent is within DENR standards

With the construction of the biogas and based on the contract with Alterna Verde, it is included in their contract that the color, pH, COD, and BOD should be within the DENR standards. Hence, it will be assured that the farm

III. Overview of Climate Change, Kyoto Protocol & Clean Development Mechanism (CDM)

Mr. Rizaldo Vargas of LANDBANK-EPMD presented the overview of Climate Change, Mr. Rizaldo Vargas of LANDBANK-EPMD presented the overview of Climate Change, Kyoto Protocol and Clean Development Mechanism. The basics on climate change covered discussion on the greenhouse gases (GHG's) which absorb solar radiation into the surface of the earth. Some of the GHG's included in the presentation are Carbon Dioxide (CO₂), methane (CH₄), nitrous oxide (NO₂), Myofilorocarbons (HFCs) and sulfur hexafluoride (SF₆). The global warming potential of the said gases were also discussed. Sources, effects and consequences of global warming of greenhouse gases were also illustrated in the presentation. Mr. Vargas further discussed the Kyoto Protocol and Clean Development Mechanism and its purpose: (1) to assist Parties not included in Annex I in achieving sustainable development and in contributing to the ultimate objective of the Convention and (2) to assist Parties included in Annex I in achieving compliance with their quantified emission limitation and reduction commitments. A list of eligible projects for CDM was also presented.

IV. LANDBANK'S Carbon Finance Support Facility

Mr. Vargas continue his presentation in informing the participants about LANDBANK's Lending Unit's role in giving financial assistance to piggery farm owners with related project

Mr. Vargas emphasized that the consultation was conducted as part of the requirements of RDF Ayala to be an eligible project under the CDM. Under the CDM,
