KEY RISKS AND RISK MANAGEMENT

You should not invest in this Fund if you do not understand or are not comfortable with the accompanying risks.

Credit Risk/Default Risk. The possibility for an investor to experience losses due to a borrower's failure to pay principal and/or interest in a timely manner on instruments such as bonds, loans, or other forms of security which the borrower issued.

Reinvestment Risks. The risk associated with the possibility of having lower returns or earnings when maturing funds or the interest earnings of funds are reinvested.

Inflation Risk. The risk that the value of investment is lower than the rate by which the prices of goods and services go up.

- The Fund implements a risk management policy that applies the principles of Value-at-Risk (VAR). VaR is a measure of the likely volatility of earnings due to rate fluctuations in the market. It is defined as a statistical estimate of the amount of loss that an "open" risk position is unlikely to exceed during a given time period with a given level of confidence.

FUND MANAGER'S REPORT

Notwithstanding the monetary easing policy embarked on by the BSP in 2019, money market special saving deposits proved to be a favoured investment class, given numerous episodes of volatility in other financial markets. Investors frequently shift placements in money market funds during times of heightened uncertainty to do away with unwanted marked-to-market losses. Hence, the fund level of money market funds could swell during these times. This will be good for the fund as certain arrangements can be reached to provide higher interest rates for a larger volume of placements.

VIEW STRATEGY

Not subject to mark-to-market valuation, plain money market funds have only one sensible strategy. And that is to get fully invested in the highest available interest-bearing deposit arrangements with the maximum one-year duration always observed.
