**You should not invest in this Fund if you do not understand or are not comfortable with the accompanying risks.**

**Credit Risk/Default Risk.** The risk of losses due to a borrower's failure to pay principal and/or interest in a timely manner on instruments such as bonds, loans, or other forms of security which the borrower issued.

**Reinvestment Risks.** The risk associated with the possibility of having lower returns or earnings when maturing funds or the interest earnings of funds are reinvested.

- The Fund implements a risk management policy that applies the principles of Value-at-Risk (VAR) and Modified Duration. VaR is defined as a statistical estimate of the amount of loss that an "open" risk position is unlikely to exceed during a given time period with a given level of confidence. Modified Duration is a means to measure the change in the value of a security in response to a change in interest rates. The formula is used to determine the effect that a 1% change in interest rates will have on the price of the bond.

### FUND MANAGER'S REPORT

All other issues took a backseat to the COVID-19 virus, which spread to all corners of the world like wildfire. No one had an idea that it would morph into a full-blown pandemic with extreme ramifications. Lockdowns of entire countries meant that national economies would essentially be closed for business. Another black swan event has dawned. Indeed, a global recession is now all but certain. Major central banks around the globe would resort to extraordinary measures to stimulate economies. But monetary actions could not spur aggregate demand when the labor force is under quarantine. Fiscal spending would only do so much as to sustain the subsistence of locked up workers. Financial markets would go through extreme volatility with no end in sight. And to make matters worse, the specter of global deflation arose after Russia and Saudi Arabia engaged in an oil price war. The investment outlook looks dire.

### VIEW STRATEGY

Central banks and national governments have to go through extreme measures just to keep economies afloat. But what can be done at this point is just to cushion the effects of imminent recessions. That said, the fear level and market volatility would be extremely high. This would render financial markets virtually "unplayable." Shorten duration and try to unload on market strength. Stay away from the market until such time that a viable treatment or vaccine is about to be developed. For now, cash is king.
