INVESTMENT OBJECTIVE AND STRATEGY

To generate capital growth while maintaining a steady stream of income through a combination of diversified investments in peso-denominated listed equities and tradable fixed income securities. The fund is suitable for investors who are willing to take extra risk in order to avail of the higher investment returns offered by the equities and debt markets.

CLIENT SUITABILITY

A *client profiling process* shall be performed prior to participating in the Fund to guide prospective investors if the Fund is suited to his/her investment objectives and risk tolerance. Clients are advised to read the Declaration of Trust/Plan Rules of the Fund, which may be obtained from the Trustee, before deciding to invest.

The LANDBANK Growth Fund is classified as a Balanced Fund suitable only for investors who:

- Have an Aggressive risk profile
- Can accept the risk that the principal investment can be lost in whole or in part
- With an investment horizon of 5 to 7 years.

KEY RISKS AND RISK MANAGEMENT

You should not invest in this Fund if you do not understand or are not comfortable with the accompanying risks.

Credit Risk/Default Risk. The possibility for an investor to experience losses due to a borrower's failure to pay principal and/or interest in a timely manner on instruments such as bonds, loans, or other forms of security which the borrower issued.

Reinvestment Risks. The risk associated with the possibility of having lower returns or earnings when maturing funds or the interest earnings of funds are reinvested.

Interest Rate Risk. This is the possibility for an investor to experience losses due to changes in interest rates.

Inflation Risk. The risk that the value of investment is lower than the rate by which the prices of goods and services go up.

Liquidity Risk. The possibility for an investor to experience losses due to the inability to sell or convert assets into cash immediately or in instances where conversion to cash is possible but at a loss.

- The Fund implements a risk management policy that applies the principles of Value-at-Risk (VaR) and Modified Duration. VaR is defined as a statistical estimate of the amount of loss that an "open" risk position is unlikely to exceed during a given time period with a given level of confidence. Modified Duration is a means to measure the change in the value of a security in response to a change in interest rates. The formula is used to determine the effect that a 1% change in interest rates will have on the price of the bond.
- The Fund's investment outlets have been subject to proper screening and evaluation in accordance with LANDBANK –TBG's accreditation process and minimum regulatory requirements.
- To maintain a balance in debt and equity, the Fund will correspondingly invest no more than 60% in equity securities traded in the PSE, including common stocks and preferred stocks of any market capitalization.

REDEMPTION CONDITIONS

Surrender of the Confirmation of Participation; subject to penalty if redeemed before the minimum holding period. For Partial Redemption, remaining balance should not be less than minimum investment.

FUND MANAGER'S REPORT

The two main financial asset classes in Philippines, bonds and equities, exhibited much volatility in the third quarter. This, as market catalysts randomly emerged without any overriding sense of direction. There is no doubt that economic recovery is already in its nascent stage; however, the Covid Delta variant has re-accelerated the infection rate. Consequently, new lockdowns had to be enforced, casting a pall on the economic rebound, with Fitch Ratings even downgrading the country's sovereign credit outlook to negative. Still, optimists see a silver lining as manufacturing output continues to recover even as OFW remittances keep surprising to the upside. Additionally, foreign funds are streaming into the country and lifting stocks as there is a general sense among foreign fund managers that emerging market stocks have lagged far too long and are now more attractive, valuation-wise. Hence, equities climbed to end the quarter at 6,952. The stock market could continue rising but major resistance levels would be hard to breach. As for interest rates, these were depressed early on but started creeping up when the Federal Reserve indicated a taper in its bond buying program starting in November.

VIEW STRATEGY

With the stock market seen to keep rising through next year, it would be prudent to sell issues which reach overbought levels and just hold on to the rest of the equity holdings. Since interest rates are seen to rise continually in the next two years, we would keep slashing portfolio duration and maintain short fixed-income positions as global monetary policies transition from accommodation to tightening.
