However, this should not be construed as a guarantee of yield.

Description of the Benchmark

Bloomberg’s BVAL Evaluated Pricing Service provides transparent and highly defensible prices for fixed-income securities across the liquidity spectrum. The key to BVAL’s methodology is its real-time access to market observations from a wealth of contributed sources. This accumulated mass of market data is the main driver of an innovative and quantitative approach that first corroborates market levels on actively traded bonds and then derives a comparable relative value price for those securities that are less liquid.

This methodology aligns with Bloomberg’s trusted capabilities as the financial industry’s leading analytics platform and source of fixed-income information. In addition to sophisticated algorithms that generate evaluated prices, the BVAL methodology assigns a BVAL Score based on the amount and consistency of market data used in Bloomberg models.

Key Characteristics of the Benchmarks

The Bloomberg Philippine Sovereign Bond Index 1 to 3 years (BPHIL13) is a rules-based market-value weighted index engineered to measure the fixed rate local currency securities publicly issued by the Philippines, including retail securities. To be included in the index, a security must have a minimum par amount of PhP3 billion and a credit quality of BBB.

The 1-month BVAL rate is the front-end of the Philippine yield curve which reflects the current yield for a 30-day fixed-income security.

Relation of the Benchmarks to the fund’s objectives/investment strategies

The fund caters to investors with moderate risk profile. It is principally invested in medium-term government and private bonds with a maximum weighted average portfolio life of up to 5 years. Since the 5-year weighted average portfolio life is almost never maximized because of liquidity considerations and the fact that the tenors of securities are reduced every day, it would be most apt to benchmark the fund performance with the BPHIL13 which is a basket of similar securities.

To manage liquidity risk, the fund has to lodge 5% of its net assets in securities with maturity not longer than 30 days. Hence, 5% of the fund is benchmarked on the 1-month BVAL price.
