Additional 888 Millions of Instructions per Second (MIPS) of Computer Associate (CA) Software Products

LANDBANK is inviting interested vendors to participate in the budget discovery/exploratory study of the Additional 888 MIPS of CA Software Products

The Bank will upgrade its Mainframe server, and considering the upgrade will increase computing capacity of our hardware computers, this will also entail new software charges, since the software charges are pegged to the size of the mainframe. CA Products are used for security and access control, file and tape management, job scheduling, testing and debugging, report generation and archiving, and other system software. The Bank uses the mainframe servers in the development and operation of the high volume and mission critical IT applications to deliver services and for the continuous operation of the Bank's mission critical core banking systems.

For interested providers, please email or call:
