Mainframe Upgrade and Its Peripheral Devices for Head Office and Disaster Recovery Site

LANDBANK is inviting interested vendors to participate in the budget discovery/exploratory study for the Mainframe Upgrade with One (1) Year Maintenance Support

The Bank will upgrade its Mainframe server. The new mainframe server upgrade will provide the necessary capacity and technical support for the bank transactions in the next five (5) years and has the ability to encrypt all data, both in-flight and at rest, across the entire system. This includes data stored on disk, data transmitted over networks and data in memory, ensuring data is protected even if the system is compromised. The new mainframe server includes enhanced security features such as two-factor authentication, secure key management and quantum safe cryptography.

For interested providers, please email or call:
