

REQUEST FOR INFORMATION

Title of the project	Hyper Converged Infrastructure - Modernizing Dev Ops Infrastructure by Private Cloud Deployment with Three (3) Years Maintenance and Support Services
Date of Posting	14 March 2025
Description	<p>Hyper Converged Infrastructure - Modernizing Dev Ops Infrastructure by Private Cloud Deployment is an on-premise rack-scale, high available infrastructure built to address the Bank's compute, network and storage requirements. This infrastructure also comes with a virtualization software, that will help the Bank manage and segregate different systems and can efficiently allocate the necessary hardware resources accordingly.</p> <p>Due to the high demand from the Bank's mission critical systems, both in production and other environments, there is a need for server and storage capacity. This converged infrastructure will also facilitate the rapid deployment of the Bank's application workloads for production systems.</p>
