**Credit Risk/Default Risk.** The risk of losses due to a borrower's failure to pay principal and/or interest in a timely manner on instruments such as bonds, loans, or other forms of security which the borrower issued.

**Reinvestment Risks.** The risk associated with the possibility of having lower returns or earnings when maturing funds or the interest earnings of funds are reinvested.

- The Fund implements a risk management policy that applies the principles of Value-at-Risk (VAR) and Modified Duration. VaR is defined as a statistical estimate of the amount of loss that an "open" risk position is unlikely to exceed during a given time period with a given level of confidence. Modified Duration is a means to measure the change in the value of a security in response to a change in interest rates. The formula is used to determine the effect that a 1% change in interest rates will have on the price of the bond.
- The Fund's investment outlets have been subject to proper screening and evaluation in accordance with LANDBANK – TBG's accreditation process and minimum regulatory requirements.

**REDEMPTION CONDITIONS**

**FUND MANAGER'S REPORT**

Philippine equities staged a healthy rally in Q2, with the index rising 7.5% for the period, after languishing for the most part of Q1. Although Q1 corporate earnings results were just generally in line with expectations and GDP growth disappointed local investors, the 6.4% Q1 economic expansion was good enough for foreign portfolio investments. But what really served as a catalyst for much foreign fund inflows into the stock market was the Congressional passage of the first tranche of the administration's fiscal reform agenda. As a result, the market rose above the 8,000 resistance before retreating again by the end of the quarter on hawkish Fed comments.

**VIEW STRATEGY**

The index started to show a strong resistance at the 8,000 level for the past months. This can be attributed to the single digits EPS shares growth of the 1Q17 earning, of which some of the analyst doesn't see any reversal of trend for the 2Q2017. Despite it, the PSE index managed to have double digit YTD at 14.66%.

The strategy of the fund is to maximize the exposures for index stocks & preferred shares relative to the global fund rotational flows and local corporate earnings expectations/outlook. We shall continually and closely monitor key market indicators and act accordingly.
