INVESTMENT OBJECTIVE AND STRATEGY

To generate capital growth while maintaining steady stream of income through a combination of diversified investments in peso-denominated listed equities and tradable fixed income securities. The fund is suitable for investors who are willing to take extra risk in order to avail of the higher investment returns offered by the equities and debt markets.

CLIENT SUITABILITY

A *client profiling process* should be performed prior to participating in the Fund to guide prospective investor if the Fund is suited to his/her investment objectives and risk tolerance. Clients are advised to read the Declaration of Trust/Plan Rules of the Fund, which may be obtained from the Trustee, before deciding to invest.

The LANDBANK Growth Fund is classified as a Balanced Fund suitable only for investors who:

- Have an Aggressive risk profile
- Can accept the risk that the principal investment can be lost in whole or in part
- With an investment horizon of 5 to 7 years.

KEY RISKS AND RISK MANAGEMENT

You should not invest in this Fund if you do not understand or are not comfortable with the accompanying risks.

Credit Risk/Default Risk. The risk of losses due to a borrower's failure to pay principal and/or interest in a timely manner on instruments such as bonds, loans, or other forms of security which the borrower issued.

Reinvestment Risks. The risk associated with the possibility of having lower returns or earnings when maturing funds or the interest earnings of funds are reinvested.

Interest Rate Risk. This is the possibility for an investor to experience losses due to changes in interest rates.

Market/Price Risk. This is the possibility for an investor to experience losses due to changes in market prices of securities.

Inflation Risk. The risk that the value of investment is lower than the rate by which the prices of goods and services go up.

Liquidity Risk. This is the possibility for an investor to experience losses due to the inability to sell or convert assets into cash immediately or in instances where conversion to cash is possible but at a loss.

- The Fund implements a risk management policy that applies the principles of Value-at-Risk (VAR) and Modified Duration. VaR is defined as a statistical estimate of the amount of loss that an "open" risk position is unlikely to exceed during a given time period with a given level of confidence. Modified Duration is a means to measure the change in the value of a security in response to a change in interest rates. The formula is used to determine the effect that a 1% change in interest rates will have on the price of the bond.
- The Fund's investment outlets have been subject to proper screening and evaluation in accordance with LANDBANK – TBG's accreditation process and minimum regulatory requirements.
- To maintain a balance in debt and equity, the Fund will correspondingly invest no more than 60% in equity securities traded in the PSE, including common stocks and preferred stocks of any market capitalization.

REDEMPTION CONDITIONS

Surrender of the Confirmation of Participation; subject to penalty if redeemed before the minimum holding period. For Partial Redemption, remaining balance should not be less than minimum investment.

FUND MANAGER'S REPORT

The Philippine government's GDP forecast targets 6.5-6.9% annual growth in 2018; the first three quarters now average 6.3%. This is below the current administration's initial target as higher consumer prices cutback a considerable portion of spending. More so, the higher borrowing costs from the BSP's successive tightening measures could likely weigh on the fourth quarter growth figure. Nonetheless, domestic growth remains robust against regional peers, and resilient despite global economic activity possibly slowing. The local stock barometer, however, remained vulnerable to swings in global equity markets. Fears of a fast-paced tightening by the Federal Reserve have sent valuations tumbling with the Philippine Stock Exchange index riding the volatility. Eventually, the uncertainty over monetary policy and trade has induced the index to consolidate before finally closing lower at 7,466.02 level on the last trading day of 2018.

VIEW STRATEGY

To minimize the volatility due external trade war tensions, rising inflationary pressures, and considerable foreign selling pressure on the local market, we've had substantially increase our cash position by reducing our exposures on equities, and shorten the portfolio duration. Moving forward, our strategy is to deliberately accumulate issues that can outperformed the PSE index, and cautiously lengthen the fund's portfolio duration by adding fixed income on the medium to long-end of the yield curve for higher yield.
